

EDGARDO PAZ-ROMERO

☎ (786) 381-4136 | Gedgardopazromero@gmail.com | github.com/edgardopaz
Philadelphia, PA

EDUCATION

Temple University

Aug 2024 – May 2028

Bachelor of Science in Computer Science, Minor in Management Information Systems, GPA: 3.76

Philadelphia, PA

- **Organizations & Clubs:** ColorStack, SHPE, ACM (Association for Computing Machinery)

TECHNICAL SKILLS

Languages: Python, Java, C, SQL, JavaScript, TypeScript, Golang

Cloud & DevOps: AWS (S3), Docker, Kubernetes, Linux/Bash, Git, GitLab, Jira

Backend & Frameworks: Node.js, Express, Flask, SQLite, REST APIs, Selenium, React.js, Angular

EXPERIENCE

NextGen Federal Systems

Morgantown, WV

Software Engineer Intern, Weather Modeling Platform

May 2026 – Present

- Rewrote a **Python** dataset removal microservice on **Kubernetes** to recursively delete directory trees from the root instead of traversing each subdirectory, eliminating **pod hangs** that previously occurred on **every** deletion of multi-gigabyte **Zarr** archives.
- Train a **contrail prediction model** built on **pycontrails** using **Zarr**-formatted weather data on a **high-performance computing** cluster, integrating it with the **MISTK** testing harness and evaluating **AWS S3** for dataset storage.
- Participate in **Agile** biweekly standups, managing task lifecycles in **Jira** and maintaining source code in **GitLab**.

Spiideo

Philadelphia, PA

Technical Operations Agent

Sep 2026 – Present

- Monitor **logs** and incidents across hundreds of concurrent live video streams daily, surfacing system-level problems before they require escalation to development teams.
- Triage and debug stream outages through **incident.io**, reading incident threads and log output to diagnose root causes and restore service.
- Serve in an **on-call** rotation centered on **observability**, log analysis, and troubleshooting across the streaming pipeline.

Owl Hacks, Temple University Hackathon

Philadelphia, PA

Operations Team Member

June 2026 – Sep 2026

- Plan the full weekend **run of show** for a university-wide hackathon, building the event schedule and programming workshops and trivia from concept through execution.
- Recruit **guest speakers** and coordinate prizes, participant gifts, and catering orders within event budgets and timelines.
- Direct **day-of operations**, keeping sessions on schedule and resolving logistical issues in real time across organizer teams.

PROJECTS

Football Transfer Value Predictor | *Python, pandas, scikit-learn, BeautifulSoup, Matplotlib*

- Built an end-to-end **ML pipeline** predicting football transfer values, pairing a cached **BeautifulSoup** scraper for market valuations with **FBref** statistics across 5 leagues and 11,000 player-seasons.
- Merged two sources with no shared identifiers via fuzzy name matching, adding validation that caught duplicate-name collisions producing statistically impossible records.
- Trained a **linear regression** model on log-transformed values with a temporal train/test split to prevent leakage, visualizing predictions and feature coefficients in **Matplotlib**.

Password Manager CLI Tool | *Golang, Cobra, SQLite*

- Built a command-line password manager in **Golang** using the **Cobra** framework, storing credentials locally in a **SQLite** database.
- Secured the master password using **Argon2** hashing to protect against automated guessing and brute-force attacks.
- Programmed command-line flags to handle standard **CRUD** operations, allowing users to easily add, view, update, and delete their saved passwords.
